Cordylanthus glandulosus Pennell & Clokey

Type Specimens and Original Descriptions of Oregon Plants in the Oregon State University Herbarium

The biological diversity of the Pacific Northwest is well-appreciated by the citizens of the region, and central to our economy and culture. Much less appreciated is the fact that the documentation of this diversity is incomplete and represents an ongoing task. The Oregon State University Herbarium is an essential resource for biodiversity research in the region. With over 400,000 specimens, it maintains the world's largest collection of Oregon plant and fungal specimens. We have imaged the 2000 type specimens in our collection, and digitized the original descriptions (known as protologues) of the 1350 plant taxa represented by these specimens. The type collection is a pressed herbarium specimen upon which the original description was based and thus has central importance in the science of plant taxonomy.

[About](#)

Passed in 1975, Oregon's Percent for Art legislation mandates that 1% of the direct construction funds of new or remodeled state buildings with construction budgets of \$100,000 or more be set aside for the acquisition of art work. The Oregon Arts Commission oversees the Program and maintains archives of slides, photographs and related documentation for the works of art selected.

Encompassing over a 30-year period, the database offers access to over 5200 items. The collection offers glimpses of 1545 unique artwork creations, visual narratives of the creative process, and documentation.

Acknowledgements

This project is a collaboration between the Oregon Arts Commission and the University of Oregon Libraries.

It is supported in part by the Institute of Museum and Library Services through the Library Services and Technology Act, and is administered by the Oregon State Library.

OSU HUMAN SERVICES RESOURCE CENTER TEXTBOOK LENDING LIBRARY

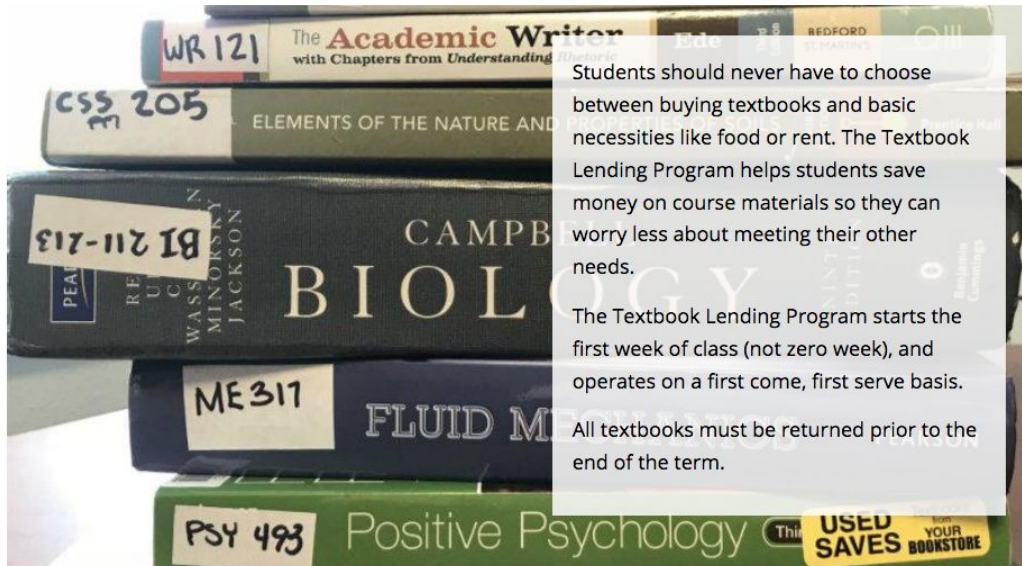

“Textbooks and lecture materials are very expensive and I have to cut my meals and eat once a day because I need to save money to buy lecture materials. Sometimes I have to lie to my friends whenever they asked me to go for lunch by saying I’ve already cooked at home although I’m not eating”.

-HSRC student, Winter 2018

HSRC LENDING LIBRARY

Textbooks

Students should never have to choose between buying textbooks and basic necessities like food or rent. The Textbook Lending Program helps students save money on course materials so they can worry less about meeting their other needs.

The Textbook Lending Program starts the first week of class (not zero week), and operates on a first come, first serve basis.

All textbooks must be returned prior to the end of the term.

Our Little Village – OSU Libraries & Press

I have been able to focus more on my studies and participate in group discussions with other traditional students. I feel less left out when I can make it to the library for an evening group study session. And, yes my grades went up, and I am less worried about making it through this phase of life and career change.”

ACRL PARTNERSHIPS

Information Literacy Contributing to Student Success

Introduction & Research Question

Research Question: How does an individual student's participation in information/media literacy sessions impact course grades?

This first phase of the project (presented here) is designed to address a primary goal of the ACRL Value of Academic Librarians report of tying Library assessment to larger institutional goals around grades, retention and employment.

Process & Methods

Assessing grades (and later retention, graduation, and employment) requires us to track the students at an individual level while still providing necessary privacy. To this end, we collected attendance rosters from media/information literacy one-shot sessions taught by librarians for delivery to Bucks' Institutional Research Office.

The Institutional Research Office used our student-level data and compared the data to student's semester grade in the relevant course to correlate student participation in media/information literacy sessions with student success.

Further, these data can be used in the future to connect to retention, employment and graduation data collected in future End of Semester surveys (which are stored by student number).

Results

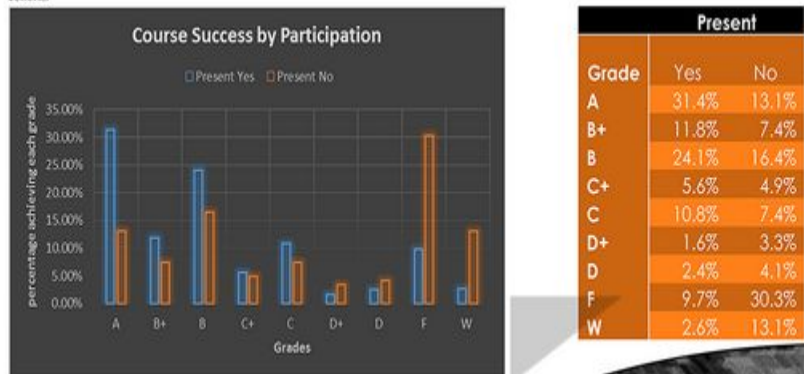

~Spring 2013~

Attendance data from a total of 1,119 students enrolled in 50 classes were collected (1,002 were identified as present/absent and retained for analysis). Analysis of students by course type (history, composition, etc) was inclusive. Only one course had a significant p-value and t-test in comparing term GPA to library participation (or not), but in closer analysis the course grade difference was not significant. A Levene's test for the equality of variances was used, but sample size may have impacted the results (for $N < 30$ nonparametric statistics were used to confirm results). The main value of these results is in having student numbers to compare against future data on retention, graduation, and employment.

~Fall 2013~

A total of 1,077 students were identified as either present or absent for analysis. The t-test found strongly significant differences between course grades of students that participated in a library session or didn't. **83.7% of students who participated were successful (grade of C or better) in their course compared to 49.2% who didn't participate.** Due to the number of uncontrolled factors involved, however, no causal link can be demonstrated.

As students move through their courses at Bucks and drop out, graduate, transfer and get jobs more data analysis will clarify the results for these cohorts.

ASSESSMENT

in Action

This project is part of the program "Assessment in Action: Academic Libraries and Student Success" which is undertaken by the Association of College and Research Libraries (ACRL) in partnership with the Association for Institutional Research and the Association of Public and Land-grant Universities. The program, a cornerstone of ACRL's Value of Academic Librarians initiative, is made possible by the Institute of Museum and Library Services.

Conclusion

The mean grade of students who participated in the program was significantly higher than the mean grade of students who did not participate. This may be due to factors other than library session participation.

Participation in media/information literacy sessions does seem to have a significant positive impact on student success.

Next Steps

- Analyze the Spring 2014 data
- Analyze existing Tutoring Center student-level data: Does attending a library session and a tutoring session have a significant additional impact?
- Compile End of Semester Survey data on graduation, retention and employment for the three semesters of student numbers we now have.
- Add more points of collection: Tech help desk, reference desk

ATTRIBUTES OF SUCCESSFUL PARTNERSHIPS

- Trust
- Clear roles & responsibilities
- Strong contributions
- Expectation of success

PAIR & SHARE ACTIVITY

- Spend 5-8 minutes at your table talking with the people about what constitutes a successful partnership!
- Please share 1 or 2 attributes of successful partnership at your table.
- We'll do a popcorn style response for those who are willing to share.

THANK YOU!
